DECISION INC.

QLIK SENSE ANALYSIS TRAINING

Qlik Sense provides information insights with the Associative Engine, to enable fast, data-driven decision making. It includes a powerful scripting language but it is often under-utilised due to the extensive flexibility and customisation possible within the language.

" Qlik Sense is a leading Business Intelligence and Analytics solution"
- Gartner

One such example is the use of Set Analysis functionality, which enables you to provide detailed conditions when calculating custom measures. Furthermore, collections of custom measures may be compared to one another, to expose advanced insights. We have developed a specialised programme to cover these concepts, and ensure you are ready to start exploring the full potential of the Qlik scripting language.

QLIK SENSE ANALYSIS TRAINING MODULES

QLIK Sense Analysis (2 Days)

• Overview of Data Manager
• Overview of Script Editor
• Loading data with Data Manager
